

Case Study

Learn about our customer success stories.

THE CHALLENGE

324 inspections in 59 cities - Hurricane Ian (Category 4) hit Florida on September 28, 2022. Lenders needed a quick update on the current state of their projects immediately after the storm to assess the damage.

SOLUTION

1. We engaged our 19 inspectors in the storm area and assigned the inspections in our field management platform.
2. The lenders had 324 projects in 59 cities that were potentially impacted.

RESULTS

Most inspectors were able to visit the sites in the first 3 days. We added survey questions to their assignment to assess the damage along with photos.

Our team responded back with most projects in the first 3 days. Some locations were off limits, but all were completed within a 2-week period.

"Thanks for making our lives so much easier."
